## Highly Anticipated Veterinary Mentorship Program Launches

The Ready, Vet, Go Mentorship Program for New Veterinary Graduates equips professionals with skills not learned in school, but necessary for long, successful careers

**OAKLAND, CA** — Ready, Vet, Go, the veterinary profession’s newest and most robust mentorship program for new veterinary graduates, officially launched on May 2, 2022, with its first cohort, a group of eight veterinary professionals from four different VetnCare hospitals in the Bay Area.

Veterinary school equips aspiring veterinarians with the skills required to successfully diagnose, treat, and care for their animal patients. But many new veterinarians struggle with the skills not comprehensively covered during school, including client communication, time management, practice culture and team dynamics, veterinary-specific stressors, financial management amidst significant student debt, and more.

The Ready, Vet, Go Mentorship Program for New Veterinary Graduates fills the gap and helps veterinary professionals successfully transition from school to practice, so they can more quickly become confident, valued members of the veterinary team.

“After working as a veterinarian for nearly 20 years, I’ve seen far too many great veterinarians burn out and leave the profession,” said Dani Rabwin, DVM, founder and CEO of Ready, Vet, Go. “I think so much of that burnout can be avoided by more adequately preparing new veterinarians for what happens after graduation as they enter the workforce and face unique challenges unrelated to their medical training.”

Ready, Vet, Go is a six-month, online program consisting of six video modules, 28 tools and exercises to help participants implement what they've learned, live monthly group coaching sessions with Dr. Rabwin, the Vet's Success Journal, and access to Ready, Vet, Go's private online communication group. Those who join at the VIP level also enjoy one-on-one coaching from Dr. Rabwin. Program participants will learn how to:

- Accelerate their confidence and quickly build trust with clients
- Effectively manage their time, so they can get everything done and maintain a life outside of work, without burning out
- Find their place in the practice, so they become a valued member of the team
- Handle the biggest veterinary-specific stressors, so they can sleep well at night knowing they're doing their best
- Prevent burnout and thrive, not just survive, for a sustainable and happy career
- Optimize their finances
- And much more

"I've been informally mentoring new graduates for so long, and I'm excited to launch this program so more new veterinarians can start their careers on the right foot," Dr. Rabwin said. "So many practices are desperate for vets, yet they are reluctant to hire new graduates because they're too busy to provide adequate mentorship. That's where I come in. When you have direct access to this level of mentoring, with someone who understands exactly what you're going through, you avoid the rookie mistakes and you start your journey as a veterinarian the right way."

The next Ready, Vet, Go session begins June 15, 2022. Veterinary students or recent graduates looking for support, as well as practice owners and managers hoping to provide new hires with the support they need, can learn more about Ready, Vet, Go at [readyvetgo.co](http://readyvetgo.co).
